DEBOLT

NOTE: no logs provided over the Debolt interval, lithological column is estimated based on samples only and thickness and stratigraphic placement are only approximate.

The upper Debolt consist of a tight dolomite overlying a tight limestone. The lower Debolt consist of a porous vuggy dolomite with good intercrystalline porosity.

A large open fracture was observed in the 720m sample (represents 715-720m).
No test data was available.
